

Handicare Freecurve stairlift

FOR CURVED STAIRCASES

This Single-Tube Design is an Elegant Solution for Your Curved or Turning Staircase

The Freecurve stairlift is built just for you – with a custom fabricated curved rail that hugs the curves of your staircase providing the optimum fit. Even narrow or steep staircases can usually be accommodated thanks to the 2-way power swivel option that turns the seat as the stairlift descends or ascends. Add other options such as the active seat that gently raises you out of the chair making it easier to get in and out. An optional parking feature allows the lift to be parked away from the bottom or top of the stairs. The Freecurve single rail stairlift system is a great choice for stairs that feature turns, curves and pie-shaped stairs.

With our proprietary photo measuring system, your stair measurements are precisely taken for custom rail fabrication in North America. You can also ask to see how the stairlift will look on your stairs before placing an order.

With a choice of seats and seat fabric colors, get just what you need to ride in comfort and style. See back page for chair measurements for each seat, including armrest width.

Alliance
The two-tone beige and brown leatherette upholstery has a slim and smart look.

Elegance
With extra-soft leatherette and armrests that adjust for extra width, many people choose this seat for pleasing comfort.

Classic
With its ergonomic and therapeutic design, this leatherette seat may provide the ultimate comfort for many users.

The Active Seat Option

The active seat option and body harness is available for the Alliance or Elegance seat styles. Neither the body harness, nor the active seat options are available for the Classic.

Body harness

Home Assessment

Your local authorized dealer will conduct a home assessment that includes precision photo measuring with our unique PS4D system to ensure a perfect fit. Our leading edge system shows you in 3D how the stairlift will look on your staircase – before you place your order!

Fabrication and Installation

Our engineers create a computer-aided drawing for custom fabrication in our North American factory. The standard capacity stairlift features fewer floor stanchions than other curved stairlifts for a sleeker appearance. Installation by your local dealer takes a few hours to a full day.

Power Up Convenience

Powered Swivel Seat

To make it easier to get off the lift at the top landing, choose the optional powered swivel. Push the joystick control to turn the seat up to 80 degrees to face the floor level for a secure feeling to step off the lift.

Two-way Power Swivel

This option accommodates narrow staircases by automatically turning the chair on an angle as it moves up and down the stairs providing adequate clearance for the lift to pass.

Powered Footrest

Choose the powered folding footrest to eliminate bending down to close the footrest. This option includes LED illumination for added safety.

Powered Hinge

To eliminate the potential tripping hazard of the rail at the bottom landing, add the powered folding hinge to move the rail out of the way.

Parking Feature

The Freecurve can be parked at the bottom and/or top landings to keep the lift away from the bottom of the stairs. This provides an area for easy on and off of the lift, and keeps the stairs clear of the chair when not in use. Parking can be added for 90 degree or 180 degree turns.

Drop Nose

A simple solution for a less obtrusive rail at the bottom landing is the optional drop nose rail feature.

Standard Features

Single Rail

Many people prefer the look of the single tube rail on their stairs. The Freecurve rail is custom made to follow the curves and turns of your stairs as tightly as possible, leaving room on the stairs for others and keeping the rail less obtrusive.

Safety Matters

Standard safety features include a retractable seatbelt and obstruction sensor system on both the footrest and the carriage. Anti-slip material is featured on the footrest.

Battery Powered

The Freecurve includes built-in charging stations to keep your stairlift charged and ready. You can use the lift several times during a power outage.

Easy to Use

The easy-to-push joystick is built into the armrest to control up and down operation. You will also receive two remote controls in order to call the stairlift up or down the stairs as needed.

Compact Design

The seat and footrest fold up to keep the chair compact when not in use.

Swivel Seat

A manual swivel seat lever allows the user to turn the seat away from the stairs at the top landing before getting off the lift.
